

JOAQUÍN ERNESTO OLIVO ESCALANTE

SYSTEMS ENGINEER | BACKEND / SOFTWARE ENGINEER

Barranquilla, Atlántico, Colombia • +57 304 201 5706 • joaquin.olivo@hotmail.com

PROFESSIONAL SUMMARY

Systems Engineer with professional experience in software development and a strong focus on backend engineering, software architecture, and product development. Hands-on experience with C#, .NET 8/9, ASP.NET Core, Entity Framework Core, SQL Server, PostgreSQL, and SQLite, as well as web development using React, Vite, and Tailwind CSS. Experienced in Clean Architecture, Domain-Driven Design (DDD), CQRS, SOLID, JWT authentication, SignalR, FluentValidation, Multi-Tenancy, Outbox Pattern, and Offline-First architectures. I have designed and implemented APIs, persistence layers, authorization systems, synchronization workflows, cloud storage integrations, and deployment configurations. Strong ability to analyze complex problems, make technical decisions, and take solutions from requirements and architecture through implementation, testing, documentation, and deployment.

TECHNICAL SKILLS

Backend & APIs	C# · .NET 8/9 · ASP.NET Core · REST APIs · Entity Framework Core · HttpClient · Hosted Services
Architecture	Clean Architecture · DDD · CQRS · SOLID · Multi-Tenancy · JWT · SignalR · FluentValidation · Outbox Pattern · Offline-First
Databases	PostgreSQL · SQL Server · SQLite · Oracle · PL/SQL · EF Core · LINQ
Frontend	React · Vite · Tailwind CSS · Bootstrap · Angular · JavaScript · HTML5 · CSS3
Desktop & Mobile	VB.NET · WPF · Kotlin · Jetpack Compose · MVVM · Hilt
DevOps & Cloud	Git · GitHub · Docker · Render · Vercel · Cloudflare R2 · environment configuration
Engineering Practices	Testing · technical documentation · software support · installation · Scrum · solution analysis & design

PROFESSIONAL EXPERIENCE

UNIVERSAL RETAIL SYSTEMS | Back-End Developer | Apr 2023 – Aug 2023

- Planned, designed, and developed software and technology products based on business and technical requirements.
- Applied software testing and validation to products developed by the engineering team.
- Installed, supported, configured, and maintained managed software products.
- Planned short- and medium-term technical activities and tracked project progress.
- Prepared installation and operation manuals and periodic progress reports.

WAWANDCO S.A.S. | Software Analyst | Apr 2022 – Jan 2023

- Developed and maintained web applications across backend and frontend layers.
- Planned and monitored assigned projects and actively participated in Scrum ceremonies.
- Performed testing and source-code quality assurance.
- Researched, analyzed, developed, and implemented software solutions.
- Provided technical support to users and enhanced applications according to customer requirements.
- Highlighted projects: Basse and DepBot.

CONVERSIFI | Coach | Apr 2021 – Apr 2022

- Supported U.S. students in developing communication and learning skills.
- Answered questions, resolved concerns, and maintained effective communication in English.

SELECTED TECHNICAL PROJECTS

UrbaniaSoft — Multi-Tenant Property Management Platform

Backend and architecture project built with ASP.NET Core 9, PostgreSQL, and Entity Framework Core. Designed a Clean Architecture and DDD-based solution with CQRS, role- and membership-based authorization, JWT authentication, SignalR, FluentValidation, and multi-tenancy. Implemented a decoupled file-storage architecture with Cloudflare R2 and prepared the system for cloud deployment. The architecture is designed for maintainability, scalability, and future product growth.

Stack: ASP.NET Core 9 · C# · EF Core · PostgreSQL · JWT · SignalR · FluentValidation · Cloudflare R2 · Render

EvolvePOS — Offline-First Point-of-Sale System

Designed and developed core backend architecture for a POS solution with local SQLite persistence and synchronization with a remote API. Applied Clean Architecture, DDD, CQRS, and the Outbox Pattern. Implemented sale-completion and cash-payment flows, local persistence, synchronization concepts, and clear separation between domain, application, and infrastructure concerns.

Stack: .NET 8 · C# · SQLite · Clean Architecture · CQRS · DDD · Outbox Pattern · Offline-First

SoundIA — AI Music Platform

Developed a full-stack music platform with an ASP.NET Core 9 backend and React/Vite/Tailwind frontend. Implemented SQLite persistence, automatic migrations, health checks, development Swagger, external API integrations, a lyrics-provider engine, and semantic validation. Containerized the backend with Docker and configured cloud deployment.

Stack: ASP.NET Core 9 · React · Vite · Tailwind CSS · SQLite · Docker · External APIs · Cloud

ControllInventory — Inventory Management Mobile App

Designed an Android inventory application using layered architecture, MVVM, dependency injection, and declarative UI. Structured the solution around maintainability and separation of concerns for real-world inventory workflows.

Stack: Kotlin · Jetpack Compose · MVVM · Hilt · Clean Architecture

EneModa — Ecommerce Web Application

Built a responsive ecommerce interface using React and Tailwind CSS, with reusable components and a focus on user experience. Deployed the application to Vercel.

Stack: React · Tailwind CSS · Vercel

EDUCATION

Universidad de la Costa — B.S. in Systems Engineering (2017 – 2023)

Universidad de la Costa — Diploma in Software Technologies for Industry 4.0 (2022)

Colegio Externado de Colombia — Commercial Technical High School — Accounting Emphasis (2016)

COURSES & ADDITIONAL TRAINING

- Learn SQL and Oracle — Udemy, 2022
- CSS3: Complete Course — Udemy, 2022
- Official Scrum Guide — Udemy, 2020
- Leadership Coherence — Fundación Centro Teológico Internacional Wesleyan, 2019

LANGUAGES

Spanish — Native | English — B1

STRENGTHS

Responsible · Adaptable · Fast learner · Analytical · Efficient · Team-oriented

PROFESSIONAL POSITIONING

Target roles: Backend Developer, .NET Developer, Software Engineer, and Full-Stack Developer. Able to contribute across implementation and architecture, including API design, persistence, security, integration, synchronization, cloud storage, deployment, testing, and long-term product evolution.
